Job Description
Developer

zest.

About us: Zest Technology Ltd provides the technology of choice for many of the UK's leading Companies and Benefit Consultants, delivering ground breaking, flexible, device independent, secure software for employees to access and manage their pensions and other employee benefits. Our client base includes major household names such as Lloyds Bank, Hargreaves Lansdown, Aviva, LinkedIn and Unum, to name but a few.

Our flagship product for employee benefit communication is built using state of the art technology and Agile development practices. We are focused on delivering secure, high performing and fully scalable software. Our modern approach includes structured architecture design; product management; Agile software development; QA practices and project management.

We pride ourselves on having a highly skilled team of people who actively engage closely with our clients to ensure that we continue to understand their needs and offer the leading software for employee engagement. Our core values of Trusted, Collaborative and Exceptional run deep through our culture.

About the job: To be a contributing member of an agile development team working as a full stack developer on our industry leading software. Day to day you will develop and maintain the code (C#, WCF, MVC and JavaScript), unit tests and DevOps code underlying the core Zest product and any associated tools and systems, as well as being involved in the planning process with other team members and the Product Team.

Reports to: Head of Technology / Senior Development Team Leader

Areas of Responsibility:

o   Development of Zest's flagship product

o   To ensure high quality and accuracy is maintained through to software release

o   Investigate, analyse and document reported defects

o   Troubleshooting and problem solving

o   Development with performance, scalability and security in mind

o   Helping Zest stay at the forefront of technological innovation

o   Be open to bringing your own expertise and experience to bear on the design and delivery of all software produced by the team

o   Maintain awareness of and comply with all legal requirements and company policies, including those relating to information security and data protection.

o   Responsibly handle, classify and manage all information, whether internal or received from external parties.
